Windows Wi-Fi Connection Guide (SSID:CEIBS-A) Windows 7To connect to "CEIBS-A" in Windows 7, it needs several steps to setup the Wi-Fi connection setting. You may refer to the follow video to setup it. Video Link: [CEIBS-A for Windows 7](#) (Please use IE browser to open this link). If you still can't connect CEIBS-A after the above settings, we recommend to uninstall the software such as "Tencent PC Manager" or "360 Total Security" if installed because it may cause the issue. If the issue persists after all these trying, you can refer to the below link to install "Cisco Anyconnect Secure Mobility Client" to connect CEIBS-A and it will work.Cisco Link: [Cisco Anyconnect for CEIBS-A](#)

Windows 8/10Step 1Go right corner and Wi-Fi, click "CEIBS-A" and tap "Connect"; Step 2Input CEIBS Email address as user name and password, click "OK"; Step 3Click "Connect" to finish
